

X25

DESCRIPTION

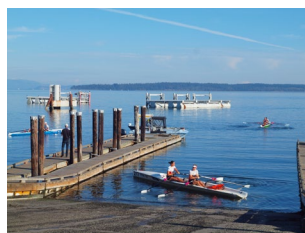

Designed for competitive rowing, its hull ensures exceptional fluidity. All the longitudinal and transverse lines that form the hull design in its submerged part have been reinforced with carbon and allow for speed on calm but also rough water. The addition of PVC or carbon reinforced bulkheads ensures more rigidity allowing for a better support of the boat for even more efficiency and responsiveness. In order to harmonize comfort and sensations, we have opted for fixed half riggers, freeing up the space around the rower.

Version Club

Wet production, Soric sandwich + expanded PVC, glass / epoxy, partitions and reinforcements

Version Carbone

Wet process, Soric sandwich + expanded Pvc, 100% carbon / epoxy, partitions and reinforcements 100% carbon
